## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, 7-25 and 27-43 drawn to a method of increasing the triglyceride content of a plant by transforming a plant with DNA encoding GPAT.

Group II, claim(s) 1, 6-21 and 26-43, drawn to a method of increasing the triglyceride content of a plant by transforming yeast with DNA encoding GPAT.

Applicants are reminded that nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent and distinct** inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq.

Upon election of a Group above, Applicant is additionally required to select a single nucleotide sequence and corresponding amino acid sequence for said Group. This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of single genus of invention, but constitutes an independent and

Art Unit: 1638

patentably distinct invention. Therefore, in addition to the election of one of Groups I or II, applicant is also required to elect one of the sequences of SEQ ID NO: 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10.

2. The inventions listed as Groups I and II, and methods comprising each of SEQ ID NO: 1-10 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: a method of transforming an organism with DNA encoding a GPAT was known, as taught by applicant in the specification at page 2 where it is disclosed that rapeseed plants were transformed with a GPAT coding sequence, wherein increasing triacylglyceride content in the organism would be inherent in a method comprising the same components and the same steps.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
